

Product Market Fit AI Framework - Component Overview

User Interface Layer

The frontend system that manages user interactions and presents results.

User Query Interface

- Natural language query processing for market research requests
- Support for complex search parameters and filters
- Real-time query refinement and suggestion system

Analytics Dashboard

- Visual representation of discovered opportunities
- Interactive maps showing geographic market distribution
- Trend analysis charts and competitive landscape views

Export & Reporting

- Customizable report generation in multiple formats
- Data export capabilities for CRM and business intelligence tools
- Automated report scheduling and distribution

Agent Orchestration Layer

The control center that manages all AI agents and coordinates their activities.

Central Agent Orchestrator

- Master controller that delegates tasks to specialized agents
- Handles inter-agent communication and data sharing
- Monitors agent performance and resource allocation

Task Queue Manager

- Prioritizes and schedules tasks based on urgency and resource availability
- Manages concurrent operations and prevents system overload
- Handles retry logic and error recovery

Priority Scheduler

- Intelligent task prioritization based on user requirements
- Dynamic resource allocation to optimize processing speed
- Load balancing across multiple agent instances

Core AI Agents

Specialized AI agents that handle specific aspects of market research.

Search Strategy Agent

- Develops optimal search strategies based on user queries
- Adapts search parameters based on initial results
- Manages search scope and depth for maximum coverage

Data Collection Agent

- Executes data gathering from multiple sources simultaneously
- Handles API rate limiting and error management
- Ensures data quality and completeness

Market Analysis Agent

- Processes collected data to identify market patterns
- Performs competitive analysis and market positioning
- Generates insights about market dynamics and trends

Opportunity Validation Agent

- Validates potential opportunities against predefined criteria
- Calculates opportunity scores and risk assessments
- Filters out low-quality or irrelevant prospects

Report Generation Agent

- Synthesizes findings into comprehensive reports
- Creates executive summaries and detailed analysis documents
- Formats output according to user preferences

Memory & Knowledge Systems

Advanced memory architecture that enables learning and optimization.

Short-term Memory

- Maintains context for current session and active tasks
- Stores intermediate results and processing states
- Enables agents to maintain conversation continuity

Long-term Memory

- Preserves historical patterns and successful strategies
- Learns from past searches to improve future performance
- Maintains user preferences and search history

Knowledge Graph

- Maps relationships between companies, markets, and opportunities
- Tracks competitive landscapes and industry connections
- Enables sophisticated relationship-based analysis

Intelligent Cache

- Optimizes API usage by caching frequently accessed data
- Reduces response times for similar queries
- Manages cache invalidation for time-sensitive information

External Data Sources

Comprehensive data collection from multiple external sources.

Google Search API

- Web search for company information and market intelligence
- News and content discovery related to target markets
- Competitor research and industry analysis

Google Maps API

- Geographic business discovery and location intelligence
- Local market analysis and competitor mapping
- Demographic and foot traffic insights

Social Media APIs

- LinkedIn for company and professional network analysis
- Twitter for sentiment analysis and trend monitoring
- Industry-specific social platforms for niche insights

Targeted Web Scraping

- Company websites and product information extraction
- Industry reports and market research documents
- Financial data and business metrics collection

News & Industry APIs

- Real-time industry news and market updates
- Press releases and company announcements
- Economic indicators and market sentiment tracking

Patent Databases

- Innovation tracking and technology landscape analysis
- Competitive intelligence through patent filings
- Emerging technology identification

CRM Integrations

- Existing customer data for market analysis
- Sales pipeline information for opportunity validation
- Historical performance data for pattern recognition

Data Processing Pipeline

Advanced NLP and data analysis capabilities.

Natural Language Processing

- Entity recognition for companies, people, and locations
- Intent analysis for understanding market opportunities
- Content summarization and key insight extraction

Entity Recognition & Extraction

- Automatic identification of relevant business entities

- Relationship mapping between entities
- Data normalization and deduplication

Sentiment Analysis

- Market sentiment tracking for industries and companies
- Customer feedback analysis and opinion mining
- Brand perception and reputation monitoring

Competitor Mapping

- Automatic competitor identification and categorization
- Competitive landscape visualization
- Market positioning analysis

Trend Analysis Engine

- Pattern recognition in market data and behaviors
- Predictive modeling for market evolution
- Seasonal and cyclical trend identification

Geographic Intelligence

Location-based market analysis and targeting capabilities.

Geographic Targeting

- Region-specific market opportunity identification
- Location-based search optimization
- Geographic market segmentation

Regional Market Analysis

- Local market conditions and characteristics assessment
- Regional economic indicators and business climate
- Cultural and demographic factors affecting market fit

Local Competition Mapping

- Neighborhood-level competitor analysis
- Market saturation assessment by geography

- Local business ecosystem mapping

Demographic Intelligence

- Population analysis and target market identification
- Economic profiles and purchasing power assessment
- Lifestyle and behavioral pattern analysis

Validation & Scoring

Sophisticated opportunity assessment and ranking system.

Opportunity Scoring Engine

- Multi-factor scoring algorithm for market opportunities
- Customizable scoring criteria based on business objectives
- Machine learning-enhanced scoring improvement over time

Risk Assessment

- Market entry risk evaluation
- Competitive threat analysis
- Economic and regulatory risk factors

Market Sizing Calculator

- Total addressable market (TAM) estimation
- Serviceable addressable market (SAM) calculation
- Market penetration potential assessment

Feasibility Validator

- Technical and operational feasibility assessment
- Resource requirement analysis
- Timeline and milestone feasibility evaluation

Output & Integration

Comprehensive output management and system integration capabilities.

Structured Data Output

- Standardized data formats for easy integration

- API-friendly JSON and XML output structures
- Customizable data schemas for specific use cases

REST API Endpoints

- Programmatic access to all framework capabilities
- Real-time query processing and result delivery
- Webhook support for automated workflows

Webhook Notifications

- Real-time alerts for new opportunities
- Automated reporting and update notifications
- Integration with external workflow systems

Results Database

- Persistent storage of all research results and insights
- Historical data preservation for trend analysis
- Advanced querying and data retrieval capabilities
